

WARBENTING

A Zine By:

Casey
Havemo

Table of Contents

- 1) An Intro warning to Climate Change
- 2) Forest Fires
- 3) Oceans, Melting Ice, and dead animals
- 4) Heat Waves
- 5) A Final Word

One day as we lay in our
own heaps of garbage and wasted land
we will wonder what we could
have done to save ourselves
from this fate worse than death

The time is now to make a change
look out for each other

Save our Planet and ourselves

Make a change before its too

LATE

Forest Fires

Charcoal colored
Smoke rises into the Sky
Seen from thousands of miles
away

Australia, Brazil, and the Western United
States to name a few
What happens without these forests
Oxygen lost carbon found
Animals that are taken for granted
Only found in zoos

-85% of wildfires
are caused by
Humans

Women and
Children are
14 times more
likely to die
in natural disasters

Naturally
Occurring fires
Can actually
be good
for the environment

Oceans, Melting Ice, and Dead Animals

Oceans rising because of melting ice
animals beyond those in the Amazon
facing extinctions

Cities of humans drowning below
Sea level

Hurricanes causing even more
devastation than they already
do

Polar Bears are
likely to start facing
reproductive failure
by 2040

A planet in despair as we sit
and watch it fall apart

* Causes damage *
* to crops throughout *
* the world particularly *
* in the global South *
*

Help me I'm
Melting

Heat Waves

Perhaps the most dangerous of all the climate catastrophes

Heat waves making places uninhabitable
Will there even be space for us all

Humans can survive up to 115°
If we aren't careful we will be the next great extinction

- Monsoon changes
- Cause crops to fail
- Putting people of lower socioeconomic status at higher risk

- The changing monsoon pattern is causing more heat waves in India

A Final Word on Climate Change

The Climate is Changing quickly and some of the changes will not be reversible.

But coming together to prevent more damage to the planet we call home

And for our fellow humans who are at risk for death
