

Psychology Major 17-18 and 18-19 Academic Bulletins
Revisions for new and revised courses

PSY201 Psychological Research I: Statistical Applications

Psychology Major

The psychology major educates students on the primary fields of the science of psychology. The major prepares students for occupations in psychology and for graduate degree programs in psychology by providing advanced coursework and laboratory experiences. Students majoring in psychology must complete all psychology courses, both transfer and NMU, with a grade of "C-" or higher. Students intending to apply to graduate psychology programs upon the completion of a bachelor's degree in psychology are strongly advised to take PY305 Psychological Statistics as an elective in this major.
